

F-7078

Ser. No. 09/890,508

IN THE CLAIMS:

Please amend the claims as shown rewritten below with amendments effected therein. Appendix I is attached hereto having marked versions of said claims with amendments indicated by brackets and underlining.

A3
4. (Amended) ~~B~~ The printing machine of claims 1 or 2, wherein the cassette unit (C, C') in the servicing position is located completely next to the counter-pressure cylinder (2).

~~Cont
Sub B1~~
5. (Amended) ~~B~~ The printing machine of claims 1 or 2, wherein the cassette units (C, C') are supported in their servicing position in a dust-free environment. ~~112(2)~~

6. (Amended) ~~B~~ The printing machine of claims 1 or 2, wherein said machine is constructed as a satellite printing machine, and the satellite printing groups (S, S') in the area of their plate and/or rubber blanket cylinders (5, 6) form the cassette-shaped modular units (C, C'), which can be shifted axially into the servicing position.

F-7078

Ser. No. 09/890,508

A4

8. (Amended) The printing machine of claim 6, wherein more than four satellite printing groups (S, S') are provided.

9. (Amended) The printing machine of claims 1 or 2, wherein said machine is constructed as a three-cylinder printing machine, the plate cylinder and/or rubber blanket cylinder of which can be shifted individually or jointly as cassette units axially into the servicing position.

B

10. (Amended) The printing machine of claims 1 or 2, wherein said machine is constructed as a cylinder printing machine, having more than three cylinders, the plate cylinder and/or rubber blanket cylinder of which can be moved, individually or jointly as corresponding cassette units, axially into a servicing position.

11. (Amended) The printing machine of claims 1 or 2, wherein the cassette units (C, C') of the printing groups (S') are supported on rails (9, 10) of the corresponding side frames (11, 12) of the printing groups (S) and can be shifted on said rails (9, 10) or together therewith in guides (13, 14) of the side frames (11, 12) parallel and free from backlash.

Amended
Cent
Sub B1

12. (Amended) The printing machine of claims 1 or 2, wherein a plate cylinder (5) of the cassette units (C, C') is seated in a cassette housing, so that it can be adjusted axially in the peripheral direction and obliquely, and adjusting means (21) are provided for make adjustments even while the printing machine is running.

13. (Amended) The printing machine of claims 1 or 2, wherein the plate and rubber blanket cylinders (5, 6) of the printing groups (S, S') are adjustably supported by drive means (20) within the cassette housing, individually by themselves and/or jointly, against the counter-pressure cylinder (2).

14. (Amended) The printing machine of claims 1 or 2, wherein the cassette units (C, C') have at least one servo drive (40, 43) which is provided for driving the plate cylinder and/or rubber blanket cylinder and/or counter-pressure cylinder.

Amended
Cent
Sub B1

16. (Amended) The printing machine of claims 1 or 2, wherein additional units, such as illustrating devices and cleaning devices or the like (41) are provided within the range of displacement of the cassette units (C, C').

F-7078

Ser. No. 09/890,508

17. (Amended) The printing machine of claims 1 or 2, wherein the cassette unit is formed by only one plate cylinder 5, the rotation of which (arrow L) is effected by the servo drive (43) during an illustrating process.

18. (Amended) The printing machine of claims 1 or 2, wherein a supporting guide assembly (44) is provided within the range of displacement of the cassette units (C, C').

19. (Amended) The printing machine of claim 13, wherein the gear wheel connections, which are provided within the area of the servo drive (40, 43) between the plate cylinder (5) and the rubber blanket cylinder (6), are so supported by a spring-mounted compensating cogging system, that the gear wheels intermesh without backlash during the pressure actuation and the pressure take-off.

20. (Amended) The printing machine of claims 1 or 2, wherein an additional unit, which is constructed as a displaceable cassette unit for processing the printing stock further, is provided at the printing machine in close proximity to the delivery system (4).
